

The iSQAPERiS website

Authors: Jane Brandt, Giovanni Quaranta, Rosanna Salvia

DOCUMENT SUMMARY	
Project Information	
Project Title	Interactive Soil Quality Assessment in Europe and China for Agricultural Productivity and Environmental Resilience
Project Acronym	iSQAPER
Call identifier	The EU Framework Programme for Research and Innovation Horizon 2020: SFS-4-2014 Soil quality and function
Grant agreement no:	635750
Starting date	1-5-2015
End date	30-4-2020
Project duration	60 months
Web site address	www.isqaper-project.eu
Project coordination	Wageningen University
EU project representative & coordinator	Prof. Dr. C.J. Ritsema
Project Scientific Coordinator	Dr. L. Fleskens
EU project officer	Mr. Antonio Pérez-Rendón
Deliverable Information	
Deliverable title	The iSQAPERiS website
Author	Jane Brandt, Giovanni Quaranta, Rosanna Salvia
Author email	medesdesire@googlemail.com
Delivery Number	D9.1
Work package	9
WP lead	Fondazione MEDES
Nature	Report; version 1
Dissemination	Public
Editor	Luuk Fleskens
Report due date	April, 2016
Report publish date	May, 2016

iSQAPER Deliverable 9.1

Prototype iSQAPERiS website

Jane Brandt, Giovanni Quaranta, Rosanna Salvia

Partner 08 Fondazione MEDES

Preface

In iSQAPER, the role of WP9 (Dissemination and Communication) is to coordinate and facilitate contact and communication with the different groups of actors and target audiences who will be involved in the project, including the case study site stakeholders. The aim is to ensure efficient and effective dissemination of knowledge generated in the project using a variety of media and methods as appropriate for the different actors and target audiences. These will include (among others) a website and a television film specifically designed to present the key messages from iSQAPER.

There are five specific tasks in WP9

- Task 1: Development of the iSQAPER Dissemination and Communication Strategy
- Task 2: The development of methods of knowledge transfer and dissemination
- Task 3: iSQAPER information system (iSQAPERiS)
- Task 4: Promotion of SQAPP
- Task 5: iSQAPER – visual impact

Deliverable 9.1 is part of Task 3 and describes provisional structure and content of the iSQAPERiS website.

Introduction

The iSQAPERiS website will be the project's major dissemination product. In contrast to the project website (which will be used for internal organisation and management of the project), iSQAPERiS will present the key messages and scientific results making them available and accessible to all the stakeholders and target audiences.

iSQAPERiS is built in Joomla! an open source content management system with powerful functionality. The iSQAPER DOW described the likely specifications for the website as follows:

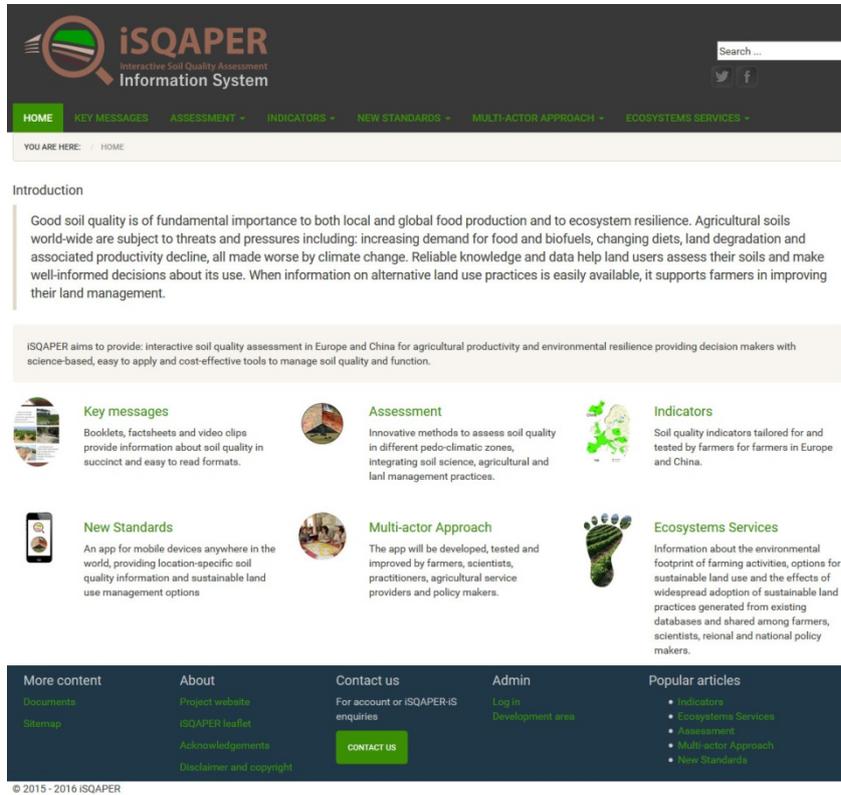

- A "Quick start guide" incorporating video clips to enable the user to familiarise him/herself with the key contents of the system;
- A menu structure adapted from iSQAPER's organisational structure with sections for each research theme and Case Study Site and designed to provide answers to questions such as "What are soil quality, agricultural productivity and environmental resilience?", "Why are they important?" "How can soil quality be assessed?" "What can be done to improve soil quality?" "How can improving soil quality increase agricultural productivity and environmental resilience?" The explanations given will be in more depth and in addition to that provided by SQAPP and will support SQAPP users and others in their understanding of the issues surrounding soil quality;
- The content organised hierarchically, with the degree complexity of information increasing with each level.
- All complete deliverables will be available for downloading and many will be reformatted for on-line reading. However the user may choose to read only the summary/poster introductions;
- Interactive tools will be used to simplify the presentation of complex information, as will Powerpoint slideshows, short video clips or animations;
- Basic website functionality will be extended to include: a document management component which provides an interface for downloading all documents; a photo gallery with titles and captions for every image; a fully-integrated glossary; interactive Google maps; a facility for translating and reading as much content as desired in the Case Study Site local languages.

The prototype iSQAPERiS has been set up according to these general specifications and can be seen online at

<http://www.isqaper-is.eu/>

Design and template

The appearance of the website uses design elements and colours from the iSQAPER website and logo. The template is responsive, to facilitate viewing it on a variety of screen sizes.

Introduction

Good soil quality is of fundamental importance to both local and global food production and to ecosystem resilience. Agricultural soils world-wide are subject to threats and pressures including: increasing demand for food and biofuels, changing diets, land degradation and associated productivity decline, all made worse by climate change. Reliable knowledge and data help land users assess their soils and make well-informed decisions about its use. When information on alternative land use practices is easily available, it supports farmers in improving their land management.

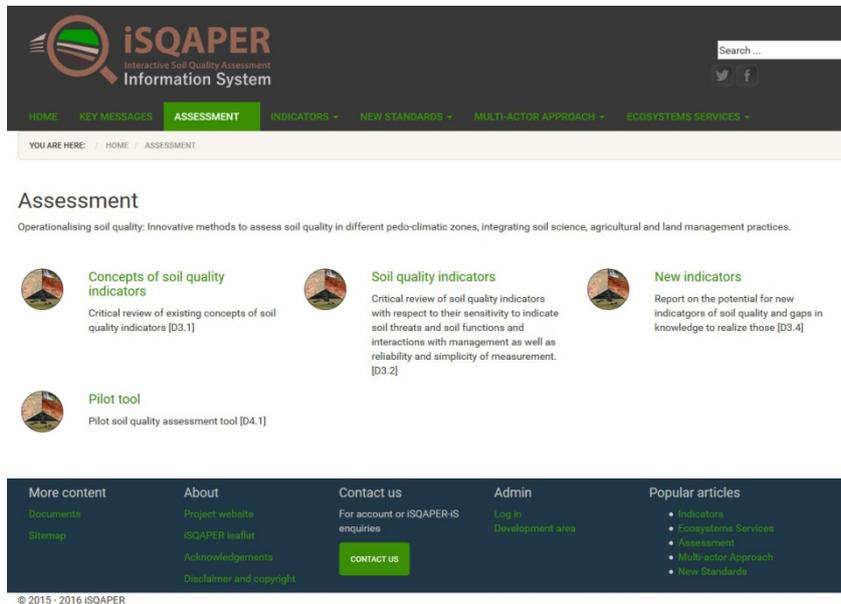

iSQAPER aims to provide: interactive soil quality assessment in Europe and China for agricultural productivity and environmental resilience providing decision makers with science-based, easy to apply and cost-effective tools to manage soil quality and function.

- Key messages**
Booklets, factsheets and video clips provide information about soil quality in succinct and easy to read formats.
- Assessment**
Innovative methods to assess soil quality in different pedo-climatic zones, integrating soil science, agricultural and land management practices.
- Indicators**
Soil quality indicators tailored for and tested by farmers for farmers in Europe and China.
- New Standards**
An app for mobile devices anywhere in the world, providing location-specific soil quality information and sustainable land use management options
- Multi-actor Approach**
The app will be developed, tested and improved by farmers, scientists, practitioners, agricultural service providers and policy makers.
- Ecosystems Services**
Information about the environmental footprint of farming activities, options for sustainable land use and the effects of widespread adoption of sustainable land practices generated from existing databases and shared among farmers, scientists, regional and national policy makers.

Assessment

Operationalising soil quality: Innovative methods to assess soil quality in different pedo-climatic zones, integrating soil science, agricultural and land management practices.

- Concepts of soil quality indicators**
Critical review of existing concepts of soil quality indicators [D3.1]
- Soil quality indicators**
Critical review of soil quality indicators with respect to their sensitivity to indicate soil threats and soil functions and interactions with management as well as reliability and simplicity of measurement. [D3.2]
- New indicators**
Report on the potential for new indicators of soil quality and gaps in knowledge to realize those [D3.4]
- Pilot tool**
Pilot soil quality assessment tool [D4.1]

Menu structure

The provisional menu structure uses the same headings that are used to explain iSQAPER in the project leaflet, with five main sections plus an additional Key Messages section.

Inside page of the iSQAPER project leaflet

Each section is divided into a number of sub-sections, the content for which will be derived from the deliverables as shown in the table below (although, this may be modified later to better accommodate the actual deliverable content). Each sub-section will be introduced by an executive summary followed by (typically) about 8-10 short articles dealing with scientific principles, experimental methods and study site examples in more detail.

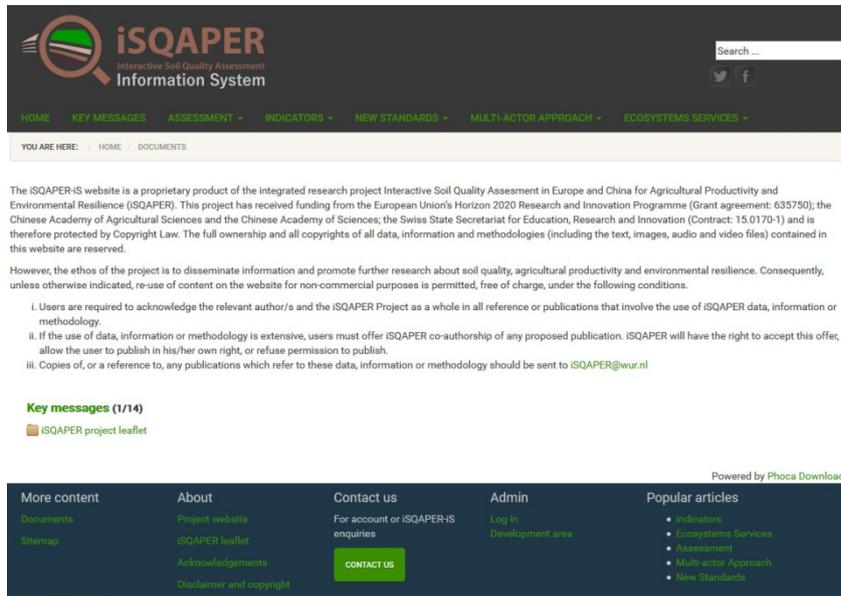

Section	Sub-section	Articles
Key messages	Booklets, factsheets and video clips provide information about soil quality in succinct and easy to read formats.	
Assessment	Operationalising soil quality: innovative methods to assess soil quality in different pedo-climatic zones, integrating soil science, agricultural and land management practices.	
	Concepts of soil quality indicators	Critical review of existing concepts of soil quality indicators [D3.1]
	Soil quality indicators	Critical review of soil quality indicators with respect to their sensitivity to indicate soil threats and soil functions and interactions with management as well as reliability and simplicity of measurement. [D3.2]
	New indicators	Report on the potential for new

		indicators of soil quality and gaps in knowledge to realize those [D3.4]
	Pilot tool	Pilot soil quality assessment tool [D4.1]
Indicators	Tailoring soil quality indicators for wide-ranging conditions: Soil quality indicators tailored for and tested by farmers for farmers in Europe and China.	
	Pedoclimatic zonation	Hierarchical and multi-scale pedoclimatic zonation [D2.1]
	Crop & livestock systems	Classification of crop and livestock systems [D2.2]
	Spatial analysis	Report on the spatial analysis of crop and livestock systems in relation to pedoclimatic conditions. [D2.3]
	Aggregate indicators	Report on a) soil quality status of trial sites, b) interactions between climate, topography and agricultural systems on indicators of soil quality, and c) evaluation of the best subset of measurements for (aggregate) indicators of soil quality. [D3.3]
	Case study sites	Soil quality inventory of Case Study Sites. [D5.2]
New Standards	Setting a new standard in soil quality assessment: An app for mobile devices anywhere in the world, providing location-specific soil quality information and sustainable land use management options.	
	SQAPP	Tested and validated final version of SQAPP. [D4.2]
	Agricultural management	Database of currently applied and promising agricultural management practices. [D5.3]
Multi-actor Approach	Underpinning SQAPP development by a multi-actor approach: The app will be developed, tested, evaluated and improved by farmers, scientists, practitioners, agricultural service providers and policy makers.	
	Stakeholder feedback	Report on stakeholder feedback to soil quality assessment tool. [D5.1]
	Management recommendation	Internal report on performance of promising land management practices to

		populate recommendations of the SQAPP. [D6.1]
	Indicator performance	Report on the performance of key and site-specific parameters and indicators for all monitored sites. [D6.2]
	Existing policy measures	Initial stocktaking report on existing policy measures. [D8.1]
	Policy relevant information	Inventory of policy relevant data and sources extracted from WPs 3-7 and applicable to policy design. [D8.2]
Ecosystems Services	Linking soil quality and provisioning of ecosystems: Information about the environmental footprint of farming activities, options for sustainable land use and the effects of widespread adoption of sustainable land practices generated from existing databases and shared among farmers, scientists, regional and national policy makers.	
	Effect of farming on soil quality	Report on definition of typical combinations of farming systems and agricultural practices in Europe and China and their effects on soil quality [D7.1]
	Effect of management on quality	Report on key management practices affecting soil quality. [D7.2]
	Soil management scenarios	Report on scenarios of future farm and soil management systems. [D7.3]
	Policies and environmental footprint	Report on the evaluation of scenarios of changed soil environmental footprint for a range of policy scenarios. [D7.4]
	Lessons for policy	Final conclusions on lessons for agricultural and environmental policy, including the post 2020 CAP. [D8.4]
	Applying SQAPP	Short report on applying the soil quality tool to different policy challenges and settings. [D8.3]

Functionality

Website functionality will develop according to the kind of content and media that we need to include. However the document download interface listed in the likely specifications has already been added.

Document downloads: screenshot

Conclusions

The prototype iSQAPERiS website has been designed so that it is visually related to, but distinct from the iSQAPER project website. It is divided into the five major sections that are used in the project leaflet, plus a Key Messages section. Each section has a number of sub-sections and articles, content for which will be derived from the project deliverables. Functionality will be expanded according to the type of content.

Should it be necessary, the website structure can be easily rearranged to suit the dissemination needs of the project.
